# Chapter 1

## Classes

### 1.1 Classes

We speak informally of *classes*. A class is specified by a unary predicate. We write  $\{x \mid P(x)\}$  for the class determined by the predicate  $P(x)$ .

**Definition 1.1.1** (Membership). Let  $a$  be an object and  $\mathbf{A}$  a class. We define the proposition  $a \in \mathbf{A}$  ( $a$  is a *member* or *element* of  $\mathbf{A}$ ) as follows:

The proposition  $a \in \{x \mid P(x)\}$  is the proposition  $P(a)$ .

**Definition 1.1.2** (Equality of Classes). Let  $\mathbf{A}$  and  $\mathbf{B}$  be classes. We say  $\mathbf{A}$  and  $\mathbf{B}$  are *equal*,  $\mathbf{A} = \mathbf{B}$ , if and only if they have exactly the same elements.

### 1.2 Subclasses

**Definition 1.2.1** (Subclass). Let  $\mathbf{A}$  and  $\mathbf{B}$  be classes. We say  $\mathbf{A}$  is a *subclass* of  $\mathbf{B}$ ,  $\mathbf{A} \subseteq \mathbf{B}$ , if and only if every member of  $\mathbf{A}$  is a member of  $\mathbf{B}$ .

We say  $\mathbf{A}$  is a *proper* subclass of  $\mathbf{B}$ ,  $\mathbf{A} \subset \mathbf{B}$ , if and only if  $\mathbf{A} \subseteq \mathbf{B}$  and  $\mathbf{A} \neq \mathbf{B}$ .

### 1.3 The Empty Class

**Definition 1.3.1** (Empty Class). The *empty* class  $\emptyset$  is  $\{x \mid \perp\}$ .

### 1.4 Finite Classes

**Definition 1.4.1.** For any objects  $a_1, \dots, a_n$ , we write  $\{a_1, \dots, a_n\}$  for the class  $\{x \mid x = a_1 \vee \dots \vee x = a_n\}$ .

## 1.5 Universal Class

**Definition 1.5.1** (Universal Class). The *universal class*  $\mathbf{V}$  is the class  $\{x \mid \top\}$ .

## 1.6 Union

**Definition 1.6.1** (Union). For any classes  $\mathbf{A}$  and  $\mathbf{B}$ , the *union*  $\mathbf{A} \cup \mathbf{B}$  is the class  $\{x \mid x \in \mathbf{A} \vee x \in \mathbf{B}\}$ .

## 1.7 Intersection

**Definition 1.7.1** (Intersection). For any classes  $\mathbf{A}$  and  $\mathbf{B}$ , the *intersection*  $\mathbf{A} \cap \mathbf{B}$  is the class  $\{x \mid x \in \mathbf{A} \wedge x \in \mathbf{B}\}$ .

## 1.8 Disjoint Classes

**Definition 1.8.1** (Disjoint). Classes  $\mathbf{A}$  and  $\mathbf{B}$  are *disjoint* if and only if  $\mathbf{A} \cap \mathbf{B} = \emptyset$ .

## 1.9 Relative Complement

**Definition 1.9.1** (Relative Complement). For any classes  $\mathbf{A}$  and  $\mathbf{B}$ , the *relative complement*  $\mathbf{A} - \mathbf{B}$  is  $\{x \in \mathbf{A} \mid x \notin \mathbf{B}\}$ .

# Chapter 2

## Sets

### 2.1 Membership

We take as undefined the notion of *set*.

We take as undefined the binary relation of *membership*,  $\in$ . If  $a \in A$  we say  $a$  is a *member* or *element* of  $A$ . If this does not hold, we write  $a \notin A$ .

**Axiom 2.1.1** (Axiom of Extensionality). *Two sets with exactly the same elements are equal.*

We may therefore identify the set  $A$  with the class  $\{x \mid x \in A\}$ .

We say a class  $\mathbf{A}$  *is a set* iff there exists a set  $A$  such that  $A = \mathbf{A}$ . That is,  $\{x \mid P(x)\}$  is a set if and only if there exists a set  $A$  such that, for all  $x$ , we have  $x \in A$  if and only if  $P(x)$ .

### 2.2 The Empty Set

**Axiom 2.2.1** (Empty Set Axiom). *The empty class  $\emptyset$  is a set.*

PROOF: It is  $\{a, a\}$ .  $\square$

### 2.4 Unions

**Definition 2.4.1** (Union). For any class of sets  $\mathbf{A}$ , the *union*  $\bigcup \mathbf{A}$  is the class  $\{x \mid \exists A \in \mathbf{A}. x \in A\}$ .

PROOF: It is  $\bigcup\{A, B\}$ .  $\square$

**Theorem Schema 2.4.4.** *For any objects  $a_1, \dots, a_n$ , the class  $\{a_1, \dots, a_n\}$  is a set.*

PROOF: It is  $\{a_1\} \cup \dots \cup \{a_n\}$ .  $\square$

## 2.5 Power Set

## 2.6 Covers

**Definition 2.6.1** (Cover). Let  $\mathbf{X}$  be a class and  $\mathcal{A} \subseteq \mathcal{P}\mathbf{X}$ . Then  $\mathcal{A}$  *covers*  $\mathbf{X}$ , or is a *covering* of  $\mathbf{X}$ , if and only if  $\bigcup \mathcal{A} = \mathbf{X}$ .

## 2.7 Subset Axioms

**Axiom Schema 2.7.1** (Subset Axioms, Aussonderung Axioms). *For any classes  $\mathbf{A}$  and set  $B$ , if  $\mathbf{A} \subseteq B$  then  $\mathbf{A}$  is a set.*

**Theorem 2.7.2.** *The universal class  $\mathbf{V}$  is not a set.*

PROOF:

$\langle 1 \rangle 1$ . ASSUME:  $\mathbf{V}$  is a set.

$\langle 1 \rangle 2$ . LET:  $R = \{x \in \mathbf{V} \mid x \notin x\}$

$\langle 1 \rangle 3$ .  $R \in R$  if and only if  $R \notin R$

$\langle 1 \rangle 4$ . Q.E.D.

PROOF: This is a contradiction.

$\square$

**Theorem 2.7.3.** *If  $A$  is a set and  $\mathbf{B}$  is a class then  $A - \mathbf{B}$  is a set.*

PROOF: It is a subset of  $A$ .  $\square$

**Theorem 2.7.4.** *For any set  $A$  and class  $\mathbf{B}$ , the class  $A \cap \mathbf{B}$  is a set.*

**Axiom 2.10.1** (Axiom of Choice). Let  $\mathcal{A}$  be a set of pairwise disjoint nonempty sets. Then there exists a set  $C$  containing exactly one element from each member of  $\mathcal{A}$ .

## 2.11 Axiom of Regularity

**Axiom 2.11.1** (Regularity). For any nonempty set  $A$ , there exists  $m \in A$  such that  $m$  and  $A$  are disjoint.

## 2.13 Partitions

**Definition 2.13.1** (Partition). A *partition*  $P$  of a set  $A$  is a set of nonempty subsets of  $A$  such that:

1. For all  $x \in A$  there exists  $S \in P$  such that  $x \in S$ .

## 11.25 Quotient Topology

**Definition 11.25.1** (Quotient Topology). Let  $X$  be a topological space,  $Y$  a set and  $p : X \rightarrow Y$  be a surjective function. Then the *quotient topology* on  $Y$  is the unique topology on  $Y$  with respect to which  $p$  is a quotient map, namely  $\mathcal{T} = \{U \in \mathcal{P}Y \mid p^{-1}(U) \text{ is open in } X\}$ .

We prove this is a topology.

- PROOF:  
 (1)1.  $Y \in \mathcal{T}$   
 PROOF: Since  $p^{-1}(Y) = X$  by surjectivity.  
 (1)2. For all  $\mathcal{A} \subseteq \mathcal{T}$  we have  $\bigcup \mathcal{A} \in \mathcal{T}$   
 PROOF: Since  $p^{-1}(\bigcup \mathcal{A}) = \bigcup_{U \in \mathcal{A}} p^{-1}(U)$   
 (1)3. For all  $U, V \in \mathcal{T}$  we have  $U \cap V \in \mathcal{T}$   
 PROOF: Since  $p^{-1}(U \cap V) = p^{-1}(U) \cap p^{-1}(V)$ .

**Definition 11.25.2** (Quotient Space). Let  $X$  be a topological space and  $\sim$  an equivalence relation on  $X$ . Let  $p : X \rightarrow X/\sim$  be the canonical surjection. Then  $X/\sim$  under the quotient topology is called a *quotient space*, *identification space* or *decomposition space* of  $X$ .

Here is a counterexample showing we cannot remove all the hypotheses of Proposition 11.24.4 except that  $A$  is saturated.

**Example 11.25.3.** Let  $X = (0, 1/2] \cup \{1\} \cup \{1 + 1/n : n \geq 2\}$  as a subspace of  $\mathbb{R}$ . Define  $R$  to be the equivalence relation on  $X$  where  $xRy$  iff  $(x = y \text{ or } |x - y| = 1)$ , so we identify  $1/n$  with  $1 + 1/n$  for all  $n \geq 2$ . Let  $Y$  be the resulting quotient space  $X/R$  in the quotient topology and  $p : X \rightarrow Y$  the canonical surjection.

Let  $A = \{1\} \cup (0, 1/2] \setminus \{1/n : n \geq 2\} \subseteq X$ . Then  $A$  is saturated under  $p$  but the restriction  $q$  of  $p$  to  $A$  is not a quotient map because it maps the saturated open set  $\{1\}$  to  $\{1\}$  which is not open in  $p(A)$ .

**Proposition 11.25.4.** Let  $X, Y$  and  $Z$  be topological spaces. Let  $f : X \rightarrow Y$  and  $g : Y \rightarrow Z$ . If  $f$  and  $g$  are quotient maps then so is  $g \circ f$ .

PROOF: From Proposition 11.22.3.  $\square$

**Example 11.25.5.** The product of two quotient maps is not necessarily a quotient map.

Let  $X = \mathbb{R}$  and  $X^*$  the quotient space formed by identifying all positive integers. Let  $p : X \twoheadrightarrow X^*$  be the canonical surjection.

We prove  $p \times \text{id}_{\mathbb{Q}} : X \times \mathbb{Q} \rightarrow X^* \times \mathbb{Q}$  is not a quotient map.

PROOF:

- ⟨1⟩2. For  $n \geq 1$ ,

- ⟨1⟩3. For  $n \geq 1$ , we have  $U_n$  is open in  $X \times \mathbb{Q}$

- ⟨1⟩8. LET:  $U' = (p \times \text{id}_{\mathbb{Q}})(U)$
- ⟨1⟩9. ASSUME: for a contradiction  $U'$  is open in  $X^* \times \mathbb{Q}$
- ⟨1⟩10.  $(1, 0) \in U'$
- ⟨1⟩11. PICK a neighbourhood  $W$  of 1 in  $X^*$  and  $\delta > 0$  such that  $W \times (-\delta, \delta) \subseteq U'$
- ⟨1⟩12.  $p^{-1}(W) \times (-\delta, \delta) \subseteq U$
- ⟨1⟩13. PICK  $n$  such that  $c_n < \delta$
- ⟨1⟩14.  $n \in p^{-1}(W)$
- ⟨1⟩15. PICK  $\epsilon > 0$  such that  $\epsilon < \delta - c_n$  and  $\epsilon < 1/4$  and  $(n - \epsilon, n + \epsilon) \subseteq p^{-1}(W)$

- ⟨1⟩17. PICK a rational  $y$  such that  $c_n - \epsilon/2 < y < c_n + \epsilon/2$

PROOF: This contradicts ⟨1⟩16.

## 12.1 The Metric Topology

**Definition 12.1.1** (Metric). Let  $X$  be a set. A *metric* on  $X$  is a function  $d : X^2 \rightarrow \mathbb{R}$  such that:

1. For all  $x, y \in X$ ,  $d(x, y) \geq 0$
2. For all  $x, y \in X$ ,  $d(x, y) = 0$  if and only if  $x = y$
3. For all  $x, y \in X$ ,  $d(x, y) = d(y, x)$
4. (*Triangle Inequality*) For all  $x, y, z \in X$ ,  $d(x, z) \leq d(x, y) + d(y, z)$

We call  $d(x, y)$  the *distance* between  $x$  and  $y$ .

**Definition 12.1.2** (Open Ball). Let  $X$  be a metric space. Let  $a \in X$  and  $\epsilon > 0$ . The *open ball* with *centre*  $a$  and *radius*  $\epsilon$  is

$$B(a, \epsilon) = \{x \in X \mid d(a, x) < \epsilon\} .$$

**Definition 12.1.3** (Metric Topology). Let  $X$  be a metric space. The *metric topology* on  $X$  is the topology generated by the basis consisting of all the open balls.

We prove this is a basis for a topology.
